

# Grafi's Universal Payment and Burning Mechanism

Grafi's payment system seamlessly integrates the \$GRAFI token into all transactions, fostering ecosystem sustainability and token value appreciation.

## Universal Payment System

- **Flexible Payments:** Users can pay for services in fiat, USDC, or other supported tokens, while payments are settled in \$GRAFI tokens behind the scenes.
- **Instant and Secure Transactions:** Utilizing crypto and smart contracts, payments are transparent, instant, and eliminate the need for escrow or delayed billing systems.
- **Structural \$GRAFI Demand:**
  - **Customers pay in fiat or other currencies.**
  - **Contributors and suppliers are compensated in \$GRAFI tokens, ensuring consistent token utilization across the platform.**

## Burning Mechanism

- **Dynamic Buyback and Burn:** A portion of revenue from all services is used to purchase and burn \$GRAFI tokens, reducing the circulating supply.
- **Deflationary Pressure:** This mechanism decreases token availability, creating long-term value appreciation while dynamically adjusting to market conditions.

By tying every transaction to \$GRAFI, Grafilab's universal payment and burning mechanism ensures token utility, sustainable growth, and robust ecosystem incentives.
